

ABSTRACT

The invention provides a method for printing wallpaper onto a web of media. The method uses an on-demand printer having a cabinet in which is located a media path. The path extends from a media loading area to a winding area. A printhead is located in the media path. The cabinet houses a processor which accepts operator inputs from one or more input devices that communicate with the processor to capture data from an operator regarding a specification for an operator's requirements. The processor establishes a pattern or a configuration for the printer according to the data.
